

Interior Systems, Inc.

Trusted for over **30 years** in the data center industry.

STRUCTURAL CEILING

STRUCTURAL CEILING

Tate Strut is the most cost effective and best time saving option on the market for hanging large heavy items in a Data Center. The Tate Strut system replaces the need for custom-built on-site structural support systems, such as Unistrut. The Tate Strut gives you the opportunity to pre-design the system so that you can take all the guesswork out of the installation process.

BENEFITS

- Reduced installation time and costs
- Increased installation flexibility
- Ability to suspend heavy equipment and lighting without damaging the finished ceiling
- Provides versatile support to create a strong and reliable system

Interior Systems, Inc. has been working in Data Centers for over **30 years** and knows the industry like very few do. Our extensive knowledge and proven experience make the difference between projects that are delivered on time and on budget — and those that suffer from costly delays and overruns.

Whether you're looking for a supply and install or an install only, give us a call today. We will be happy to discuss your next project.
