

Interior Systems, Inc.

Trusted for over **30 years** in the data center industry.

WIRE MESH PARTITIONS

WIRE MESH PARTITIONS

Wire mesh partitions provide secure, lockable enclosures for servers, networking hardware, and mission-critical equipment. They support data center operations by allowing unrestricted airflow, maintaining visibility for monitoring, and creating a strong barrier against unauthorized access and tampering. Their modular design integrates easily into existing layouts, making them ideal for colocation facilities, multi-tenant environments, and data centers requiring compliance with physical security standards.

BENEFITS

- Enhanced physical security and access control
- Maintains airflow for optimal power use efficiency
- Allows clear visibility for monitoring and inspections
- Modular design enables easy reconfiguration and integration

Interior Systems, Inc. has been working in Data Centers for over **30 years** and knows the industry like very few do. Our extensive knowledge and proven experience make the difference between projects that are delivered on time and on budget — and those that suffer from costly delays and overruns.

Whether you're looking for a supply and install or an install only, give us a call today. We will be happy to discuss your next project.
